

4 - Installing the Check Point SmartCenter

Objectives

- Check the status of the Virtual Machine MgmtSite1
- Install the SmartCenter
- Know the difference between a Primary and Secondary SmartCenter
- Install the SmartConsole clients
- Understand the importance of a rebuild strategy for the SmartCenter
- Know why the SmartCenter needs to be protected
- Know where log files are stored
- Know the use and limitation of the initial administrator
- Know the purpose of the remote GUI clients list
- Set the FQDN for the Certificate Authority
- Know the purpose and use of the SmartCenter fingerprint

Prerequisites

- VMWare Workstation or Server
- The virtual machine Mgmtsite1 needs to be available, IP address 10.1.1.1
- Check Point Window CD ISO available on the local disk

Approximate time for completing each section

Section 1	Management Server Virtual Machine	15 minutes
Section 2	Installing the Check Point SmartCenter and SmartConsole	35 minutes
	Total time	50 Min

Contents

1	Management Server Virtual Machine	3
1.1	Virtual Machine Setup – Mgmtsite1	3
1.1.1	Set the CDROM Boot Device	3
1.1.2	Check the Machine Name and IP Address	3
1.1.3	Software Applications pre-installed on the Virtual Machine	3
2	Installing the Check Point SmartCenter and SmartConsole	5
2.1	Installing the SmartCenter	5
2.1.1	Running the High Level Setup.exe	5
2.1.2	Power or UTM Product Installation	6
2.1.3	Installation Type, Demo, New, Imported	6
2.1.4	Product Components to Install	6
2.1.5	Primary or Secondary SmartCenter	7
2.2	Installing the SmartConsole Clients	8
2.2.1	Location and Clients to Install	8
2.3	Basic SmartCentre Configuration	9
2.3.1	Add license	9
2.3.2	Add the Initial Administrator	9
2.3.3	Add Remote GUI Clients	10
2.3.4	Set the Certificate Authority FQDN	11
2.3.5	SmartCenter Fingerprint	11
2.3.6	Installation complete	11
2.3.7	Reboot and Check Network Interface Status	12
